

COMPUTER BOOKING & ACCESS MANAGEMENT

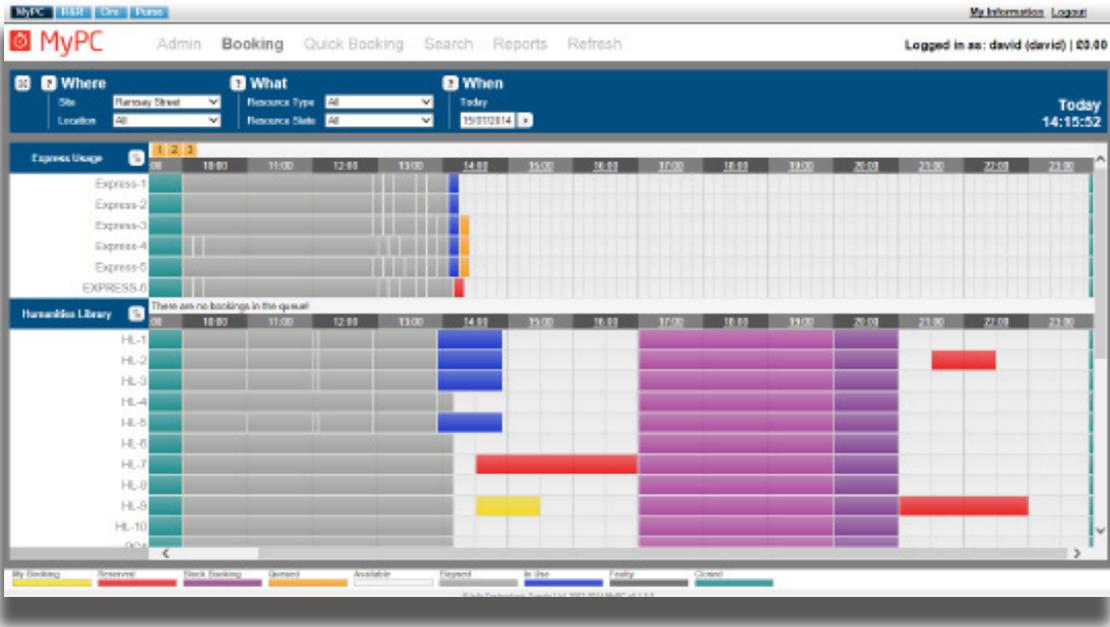

INTRODUCING MYPC

MyPC® is the ultimate solution for computer booking and access management which is widely used in Education and Public Libraries to provide librarians and IT managers with complete control over bookings and users' sessions.

MyPC's unique handling of user bookings allows the optimisation and promotion of fair usage whilst saving staff time. With hundreds of customers worldwide MyPC continues to grow and our dedicated development team are constantly working on implementing new features based on customer feedback.

“Having MyPC means we can stop people with very overdue library resources from using our facilities. This has been effective in retrieving items as students want to have access to the PCs and therefore return items they might have otherwise just kept. It also means LRC staff time is now spent supporting students and managing behaviour rather than booking people on and off computers.”

Rosie Quelch,
Network Manager,
Isle of Wight College

Book a computer by iPhone, iPad, Android devices and other smartphones

“MyPC was chosen after an extensive research period by a group of staff looking at IT provision for the new City Library. The group looked at various products on the market, but the features of MyPC including usability and specific booking functions led to the library choosing it ahead of others.”

Andrew Scrogham,
Systems Manager,
Newcastle Libraries

SEARCH & AVAILABILITY

Powerful searching capabilities allow users to quickly find exactly which computer they are looking for. Attributes can be specified such as software or hardware required allowing users to make the best choices before making a booking. Valuable time is saved with MyPC's intuitive web interface which provides a clear 'at-a-glance' view of computer availability. MyPC also features an availability display designed to run on information screens.

OPTIMISE UTILISATION

MyPC allows users to view availability of computers reducing conflict and optimising utilisation. With MyPC you can make efficient use of computers in all sites and locations. The new MyPC Maps module provides a simple way to design and present a floor plan of your chosen site(s) to clearly illustrate the location and availability of your bookable PCs.

COMMUNICATION

MyPC allows you to effectively communicate with all users at any time. You can inform users and configure instruction messages and notifications outlining the rules of bookings at all stages. With MyPC you can print or automatically send email booking receipts to users and staff. MyPC can integrate with your library management system to inform users of their library fines and outstanding items helping you to get books back on time and recover costs. MyPC also includes an optionally activated user-surveillance tool to allow staff to view screens and communicate via free text or predefined messages.

BOOKING METHODS

MyPC offers walk up, advance, book with staff and queued booking methods as well as a flexible block booking for staff and tutors. A new quick booking option is also available where you specify the duration and a computer is selected for you.

REPORTING

MyPC provides comprehensive reporting on all aspects of computer utilisation, bookings, and no shows. MyPC also reports on faulty computers and banned users, and a unique users report shows how many individuals make use of the

computer resources you provide. All reports can be scheduled for automatic delivery by email, and can be exported into common file formats including Excel, PDF, CSV and many more.

SIMPLICITY

MyPC makes booking and administration easy for staff and users. MyPC features a spreadsheet look and feel, allowing for easy point and click booking and allows booking of computers remotely in any site or location. MyPC administration and reporting is web-based with policies e.g. opening times, holidays and maximum booking length, all configurable from a single web browser.

FLEXIBILITY & CONTROL

MyPC integrates with your environment regardless of what network or Library Management System you are using. MyPC's inherent flexibility means there are limitless possibilities for who can book what, whether it be for minutes, hours or even days. MyPC fits straight into your network providing full support for Active Directory, Novell eDirectory and other LDAP compliant systems. MyPC fully supports the following client platforms: Windows XP Professional, Vista, Windows 7 (excluding Home Editions) and Windows 8* and 8.1*(in Desktop mode), VMware Virtual Desktop Infrastructure (VDI) environments, Mac OS 10.6, 10.7, 10.8 and Terminal Servers including Citrix. MyPC also allows you to add your corporate logo and colour scheme to the client logon (status screen), pop-up messages and booking screens. All of MyPC's text can be internationalised to support any European language.

WHY MYPC

MyPC is a complete solution with no hidden costs and utilises cutting-edge web technologies that support all major web browsers providing a straightforward experience to both administrators and end-users. ITS has dedicated development teams working exclusively on MyPC to ensure the product is constantly updated and matches the requirements of our customers. We also employ in-house quality assurance and testing teams to ensure MyPC remains the market leader and best of breed software.
